IoT Flow Sensors/IoT Pressure Sensors
E8FC/E8PC Series

Additional "temperature monitoring" feature that allows you to detect cooling and hydraulic pressure abnormalities quickly.
"Temperature" can also be monitored in the same position, allowing quicker detection of signs of abnormalities.
Temperature can also be monitored in the same position, allowing quicker detection of signs of abnormalities than conventional methods.

You can install the sensor without cutting the piping

You can replace pressure gauges and flow rate meters at the position where they are currently installed without cutting the piping. A wide variety of size conversion adapters are available, enabling easy replacement of existing sensors.

You can see the precise location of the abnormality with a glance

Even if the sensor is installed in dark locations or at the back of equipment at manufacturing sites, a high luminosity LED enables you to easily read the status. You can immediately tell which sensor is showing signs of abnormalities by the colors of the indicators.

You can also know when the sensor requires maintenance ahead of time

To ensure accurate monitoring of equipment states, the sensor performs self-diagnosis of its own status. It sends notification to a host device when signs of a connection error or a malfunction appears, so you can address problems before failures occur.

Diagnostic items during operations
- IO-Link communications status
- Internal system status of sensors
- Output load short circuit status

Also works in high temperatures and high pressures!

Metal pipe: Supports 10 to 25 A
Resin pipe: Supports 13 to 34 mm dia.

Water, pure water
Antifreeze

IoT Flow Sensor

E8FC

Prevents sudden stops and molding defects due to cooling abnormalities

**case 01 Welding machine**

[Deformed welding tips and overheated transformers due to cooling performance degradation]

- If the cooling water temperature rises, the welding tip or welding transformer cannot be sufficiently cooled.
- If the welding tip gets overheated and deformed, welding defects occur.
- The welding transformer gets overheated, and the equipment suddenly stops.
- You cannot detect a temperature rise by monitoring temperature alone.

You can detect signs even before welding tip deformation or sudden stops occur

Adverse effects of temperature rises

If cooling in the transformer where electric current flows to the welding tip is insufficient, the transformer gets overheated leading to deformation of the welding tip. In this case, monitoring both the cooling water "flow rate" and "temperature" is important.

You can simultaneously monitor whether the cooling water for the welder transformer has both a "optimum flow rate" and "optimum temperature", for continuous monitoring of the cooling water performance state. This enables to detect abnormality signs of equipment.

LED display for cooling performance

With the IoT Flow Sensor E8FC, you can simultaneously monitor the flow rate and temperature in the same position. Set these threshold levels, then the LED display indicates the statuses either individually or both the flow rate and temperature. You can "visualize" the status of the equipment, etc., with signs of abnormalities.
Molding defects due to cooling performance degradation

- Even if the amount of cooling water is adequate, a rise in water temperature leads to a drop in cooling performance.
- If the cooling performance declines, the processed part on the mold cannot be adequately cooled, resulting in deformation, voids, or other molding defects.
- You cannot detect a temperature rise by flow rate monitoring alone.

**You can detect signs of cooling performance degradation even before occurrence of molding defects.**

Monitor the “flow rate” and “temperature changes” in the same position, and quantify the optimum ranges for flow rate and temperature. You can detect signs of cooling performance degradation without relying on the experience or skills of maintenance personnel.

In addition, by mounting sensors on multiple pipes, you can quickly tell from the sensor LEDs what abnormality has occurred, in which pipe.
You can use signs of press pressure reduction to prevent the occurrence of product defects.

With temperature monitoring, you can detect signs of abnormalities that can cause reductions in hydraulic oil viscosity. With simultaneous monitoring of temperature and pressure in the same position, you can quantify the optimum ranges for temperature and oil pressure without relying on the experience or skills of maintenance personnel.

---

**Pressing machine**

[Press quality defects due to rises in hydraulic oil temperature]

- Rising temperatures reduce the viscosity of the hydraulic oil.
- Hydraulic pressure reduction leads to inconsistent press quality.
- You cannot detect a temperature rise by pressure monitoring alone.

**Steps until occurrence of manufacturing defects**

1. Long period of operation
2. Rise in hydraulic oil temperature
3. Reduction in hydraulic oil viscosity
4. Hydraulic pressure reduction
5. Manufacturing defects

**With E8PC,** you can detect signs or abnormalities at an early stage.

**Conventional method**

---

**Solution from OMRON**

---
Multi-sensing technology

- **Temp.**
  Uses a piezoelectric element. Since the sensing surface is made of high-hard ceramics, it withstands high pressure.

- **Pressure**
  Uses a temperature measuring element to measure the liquid temperature transmitted to the piezoelectric element. Uses a unique algorithm to estimate the temperature more accurately.

---

**case 04 Machining center**

**[Tool gripping force declines due to hydraulic oil leak]**

- Hydraulic oil temperature rises with repeated tool changes.
- Pipe packing deteriorates, resulting in hydraulic oil leak.
- Oil pressure reduction causes reduction in processing quality.
- The hydraulic pressure system is divided into multiple sections, so finding degraded packing locations takes time.

**You can use a rise in hydraulic oil temperature to detect signs of hydraulic oil leak**

You can monitor hydraulic oil temperature changes to understand how much of a rise in temperature will have an effect on packing degradation. By mounting sensors on multiple pipes, you can quickly tell from the sensor LED displays what abnormality has occurred, in which pipe.

---

**Piezoelectric element**

- **Temp.**
  Uses a piezoelectric element. Since the sensing surface is made of high-hard ceramics, it withstands high pressure.

- **Pressure**
  Uses a temperature measuring element to measure the liquid temperature transmitted to the piezoelectric element.Uses a unique algorithm to estimate the temperature more accurately.
Notifications of changes in the cooling water or hydraulic oil states are easy to understand

You can see the cause of the abnormality
Multi-sensing display

The sensor judges by monitoring "Flow rate + Temperature" and "Pressure + Temperature". Since data outputs to a PLC by the IO-Link communications is possible, it is easy to perform maintenance before entering an abnormal state. For the display colors, you can set 3 patterns, or if combined with Not lit, a total of 4 patterns.

Example of performance monitoring using IoT Flow Sensor

Normal (Green)  Temperature rise (Orange)  Flow reduction (Red)

Flow rate

Temperature

You can also see the sensor status
Self-diagnostic outputs

Self-diagnoses the sensor’s own status, and autonomously sends notification when signs of a connection error or a malfunction appears.

Notifications of changes in the cooling water or hydraulic oil states are easy to understand

You can see the cause of the abnormality
Multi-sensing display

With the flow rate at the time of setting as 100%, you can relatively measure the change in flow rate value. Smart Tuning function is convenient for cases where optimum value management of absolute values is difficult, such as when the operating environment is changing, and liquid types are changing, etc.

You can see the rate of change with a percentage

Easy to see
High luminosity LED display

A high luminosity LED gives good visibility even at the back of equipment or in dark locations.

White digital display is easy to read even from a distance.
Condition indicator is easy to read even from the opposite side.

Easy to understand
Display by unit

Converts to physical quantity units for display.

Adjust the angle according to the mounting position

Angle adjustment up to 330°
After fastening to the adapter, you can adjust the angle so that the display is easy to see.

180° reverse display
The display can rotate 180°.
Easy to use in various location

Compact and space-saving
You can even mount in narrow spaces with multiple pipes arrayed.

- 34mm dia.
- 69.4 mm
- 15 mm
- 55 mm

Direct setting
Button on the body for quick setting. After setting, you can use the key lock function to prevent operation in error.

- Response time
- Timer setting
- Flow rate/Pressure → Temperature display switching
- Threshold settings: (hysteresis width)
- Zero-cut setting
- Setting initialization, etc.

Highly durable liquid contact part

- Detecting unit: SUS304L
- O-ring: FKM
- Diaphragm pressure port: Al2O3 (alumina)
- O-ring: FKM

Easy-to-clean structure
Structure is easily removable from the piping for periodic inspections, etc., and easily cleaned.

Expanded cable and adapter lineups (sold separately)*

* Use our dedicated adapters. In addition, if there is a possibility of pulsations or vibrations to a Pressure Sensor, we recommend the attachment of a throttle (sold separately).
IoT Flow Sensors
E8FC

Detect Signs of Abnormalities in Cooling Water by Simultaneous Measurement of “Flow Rate + Temperature”

- Multi-sensing of “Flow rate + temperature” for preventing a sudden stops or manufacturing defects.
- Various lineup of replacement adapters to enable easy replacement of your current pressure gauges and flow meters.
- Analog current output function in addition to the IO-Link communications function that can perform self-diagnosis of abnormalities in the sensor itself.

#### Temperature monitoring
- Temperature monitoring rated range: 0 to 85°C
- Temperature monitoring precision: ±2.5°C
- Temperature repeatability: ±0.5°C

#### Control output judgment (selectable)
- Standard mode: Judge if the measured value is the threshold value or more (or less).
- Window mode: Judge if the measured value is within the upper and lower limits.

#### Display method
- Numerical value indication: 4-digit 7-segment white LED with inverting function
- Status indicators: The content of indication is selectable from green, orange, red, and OFF.
- Output indicator: OUT1 operation (orange), OUT2 operation (orange)
- Unit indicator: l/min (White), % (White), °C (White), ST (White)
- Communication indicator: Lighting when communications are in progress (green)

#### Delay setting
- 1 to 9999 ms (Select a function from invalid, ON delay, OFF delay, and one-shot.)

#### Connection method
- M12, 4-pole connector type

#### Output ch1 (selectable)
- Control output: Flow rate control output (N.O./N.C.)
- Pulse output: 1/10/100/1000 l

#### Output ch2 (selectable)
- Control output: Flow rate control output (N.O./N.C.) / temperature control output (N.O./N.C.)
- Analog current output: Flow rate analog output / temperature analog output
- Pulse output: 1/10/100/1000 l

#### External input
- Smart tuning, One-point tuning, short-circuit current 1.5 mA or less, input time 20 ms or more
Even instantaneous pressure fluctuation such as water hammer must be within the permissible pressure.

The flow rate precision is defined based on the values measured in Omron’s pre-shipment adjustment facility using water at the ordinary temperature (approx. 23°C).

In the ordinary temperature environment (approx. 23°C), install the product with the long side of the chassis holding unit toward the upstream of the pipe.

The measured value might vary due to fluid pulsation or pipe clogging.

Cutting to zero is the function outputting the flow rate less than the minimum rated flow rate as zero.

The ambient temperature characteristics are defined based on the values measured in the following environment using water.

In ordinary temperature environment (approx. 23°C) / pipe diameter 20A / straight pipe length 200 mm or more / recommended joint (KITZ’s PTZ-20A) / dedicated adapter (E8FC-YA-R20A) / Install the product with the long side of the chassis holding unit toward the upstream of the pipe.

The temperature precision is defined based on the values measured in the following environment using water.

In ordinary temperature environment (approx. 23°C) / pipe diameter 20A / straight pipe length 200 mm or more / recommended joint (KITZ’s PTZ-20A) / dedicated adapter (E8FC-YA-R20A) / Install the product with the long side of the chassis holding unit toward the upstream of the pipe.

If the pipe temperature exceeds 70°C, do not contact any cables with the pipe.

Do not connect analog current output with the master unit of IO-Link. Otherwise, the unit might fail.

*3. Factory default
**E8FC**

**Nomenclature**

- **Status indicators (green/orange/red)**
  - Lit up according to the measured value and setting of flow rate and temperature.

- **Unit indicator (white)**
  - Displays the current unit setting.

- **ST indicator (white)**
  - Lit up when smart tuning is executed.

- **Communication indicator (green)**
  - Lit up when IO-Link communications are in progress.

- **Output indicator (orange)**
  - Lit up when output is ON.

- **Measured value (white digital)**
  - Displays the measured value.

**Switch setting**

- **[UP/DOWN] button**
  - Changes the threshold value and setting parameters.

**Mode switching**

- **[MODE] button**
  - Calls a menu, selects (determine) a menu, and switches the unit.
Safety Precautions

Be sure to read the precautions for all models in the website at: http://www.ia.omron.com/.

Warning Indications

| Warning | Indicates a potentially hazardous situation which, if not avoided, will result in minor or moderate injury, or may result in serious injury or death. Additionally, there may be significant property damage. |
| Caution | Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury or in property damage. |

Precautions for Safe Use

Supplementary comments on what to do or avoid doing, to use the product safely.

Precaution for Correct Use

Supplementary comments on what to do or avoid doing, to prevent failure to operate, malfunction or undesirable effect on product performance.

Meaning of Product Safety Symbols

- General Prohibition
  Indicates the instructions of unspecified prohibited action.

- General caution
  Indicates unspecified general alert.

- Caution, explosion
  Indicates the possibility of explosion under specific conditions.

- Caution, high temperature
  Indicates the possibility of injuries by high temperature under specific conditions.

- Caution, fire
  Indicates the possibility of fires under specific conditions.

WARNING

This product is not designed or rated for ensuring safety of persons either directly or indirectly. Do not use it for such purpose.

The specification of this product is not for beverage, food, or medical chemicals. Do not use this product for the device contacting beverage, food, or medical chemicals.

Do not use the product with voltage in excess of the rated voltage. Excess voltage may result in malfunction or fire.

This product is not assumed to be used in explosion-proof areas. Do not use the product in explosion proof areas.

Never use the product with an AC power supply. Otherwise, explosion may result.

The product might fail or be destroyed. Do not impress any pressure exceeding the rated value even instantaneously.

The product might fail or be damaged. Do not stand on the sensor, or add excessive load.

The fluid in the pipe might spout out. Tighten the prescribed O-ring to the pipe.

Caution

The product might fail or be damaged. Piping, wiring, maintenance, and checkup must be done by operators with expertise.

The product might be damaged or fire. Do not short-circuit load.

The product might be damaged or fire. Be careful with polarity of the power supply to avoid incorrect wiring.

The user might get burned. The sensor surface temperature rises depending on the operating condition such as ambient temperature, power supply voltage, or fluid temperature. Be careful when operating or cleaning the product.

Precautions for Safe Use

The following items are necessary for ensuring safety, so be sure to observe them.

- Do not use the product in the following installation areas.
  1. Locations subject to direct sunlight
  2. Locations subject to condensation due to high humidity
  3. Locations subject to corrosive gas
  4. Locations subject to vibration or mechanical shocks exceeding the rated values
  5. Locations subject to exposure to water, oil, chemicals
  6. Locations subject to stream
  7. Locations subjected to strong magnetic field or electric field

- Do not use in an environment exposed to an inflammable/explosive gas

- Do not use in an ambient atmosphere or environment exceeding the rating.
  - Although the product is classified into IP67, do not use it in water, under the rain, or outdoor.
  - Do not use the product for any inflammable, explosive, or corrosive fluids.

- Do not freeze or solidify the fluid. Otherwise, the product might fail or be damaged.

- Provide a relief valve to prevent the circuit from liquid sealing.

- The surface temperature of the sensing part may increase. Use caution while operating and cleaning the product.

- Make sure safety before installing/replacing the sensor, for example, stop the machine or depressurize the fluid.

- In order to ensure safety of user operations and maintenance, install the product apart from high-pressure equipment or power equipment.

- When revolving the product, support the chassis holding part with a spanner.

- Wire this product separately from high-pressure wire or power wire. If wiring together with such wire or in the same duct, this product might receive induction, which might cause malfunctioning...
or damages.
- Be sure to turn OFF the power before wiring.
- Do not wire with a wet hand.
- Use this product under the rated or smaller load. Otherwise, the product might be damaged or catch fire.
- Connect load correctly.
- If the load and sensor use separate power supplies, turn ON the sensor's power first.
- Process unwired terminals so that they do not contact other wire or equipment.
- Do not use the product with the main unit damaged.
- Be careful with the sharp screw parts.
- Do not pull connected cables hard.
- Do not use organic solvents such as thinner or alcohol for cleaning because they deteriorate the degree of protection and indication performance.
- Do not try to disassemble, repair, or alter the main unit.
- If disposing this product, handle it as industrial waste.
- This product is certified by the UL standard based on the assumption that Class 2 circuits are used. Operate this product using Class 2 power supply in the United States or Canada.
- Use cables of Omron model XS5F-D4 series or model XS5W-D4 series.
- The mark shown on the sensor nameplate means direct current.
- Electromagnetic environment: Industrial electromagnetic environment (EN 61326-1 Table2)

Precaution for Correct Use
- Do not use this product as a measuring apparatus for commercial transactions.
- Do not use this product for any fluids containing impurities.
- If the fluid is non-conductive and the pipe is made of resin, ground the chassis.
- Use the product in the condition that the fluid temperature is higher than the ambient temperature. For preventing condensation, use the product as dehumidifying by air conditioning and 30 cm or more apart from cold pipes.
- Do not add excessive impart such as falling or collision.
- Do not touch the detecting unit with bare hands.
- Apply grease to the thread parts to prevent them from getting hard to remove due to seizure.
- Fasten by the prescribed torque.
- When using a cable of which diameter is different from that of the recommended cable, prepare a ferrite core suitable for the cable diameter separately.
- If using the product in IO-Link mode, keep the wiring length between the master unit and sensor 20 m or less.
- Just after the power is turned ON, it might take long for the measured value to get stable according to the operating environment.
- Do not connect with the IO-Link master unit in analog output mode. This product might be damaged depending on the specification of the IO-Link master.
- Do not push the button with something sharp such as a screwdriver because doing so might damage the button.
- If using the product in an environment subject to sharp temperature variation, evaluate the product in the environment in advance.
- When implementing maintenance, use a soft brush or waste cloth so as not to damage the detecting unit or O-ring.
- When replacing the O-ring, prevent dust/dirt from being mixed into the O-ring.
- Use the product in an environment at altitudes less than 2,000 m.
- Use the product in an environment of pollution degree 3.

Piping Method
- Use the adapter according to the connection pipe diameter of the piping.
- Install the sensor such that its tip is in contact with the fluid.
- In the case of horizontal piping, it is recommended to install the sensor from the side.
- In the case of vertical piping, it is recommended to install the sensor such that the flow is from the bottom to the top.
- When revolving the product, support the chassis holding part with a spanner.

Piping Method
- Install the sensor such that its tip is in contact with the fluid.
- In the case of horizontal piping, it is recommended to install the sensor from the side.
- In the case of vertical piping, it is recommended to install the sensor such that the flow is from the bottom to the top.
- When revolving the product, support the chassis holding part with a spanner.

Precaution for Correct Use
- Do not use this product as a measuring apparatus for commercial transactions.
- Do not use this product for any fluids containing impurities.
- If the fluid is non-conductive and the pipe is made of resin, ground the chassis.
- Use the product in the condition that the fluid temperature is higher than the ambient temperature. For preventing condensation, use the product as dehumidifying by air conditioning and 30 cm or more apart from cold pipes.
- Do not add excessive impart such as falling or collision.
- Do not touch the detecting unit with bare hands.
- Apply grease to the thread parts to prevent them from getting hard to remove due to seizure.
- Fasten by the prescribed torque.
- When using a cable of which diameter is different from that of the recommended cable, prepare a ferrite core suitable for the cable diameter separately.
- If using the product in IO-Link mode, keep the wiring length between the master unit and sensor 20 m or less.
- Just after the power is turned ON, it might take long for the measured value to get stable according to the operating environment.
- Do not connect with the IO-Link master unit in analog output mode. This product might be damaged depending on the specification of the IO-Link master.
- Do not push the button with something sharp such as a screwdriver because doing so might damage the button.
- If using the product in an environment subject to sharp temperature variation, evaluate the product in the environment in advance.
- When implementing maintenance, use a soft brush or waste cloth so as not to damage the detecting unit or O-ring.
- When replacing the O-ring, prevent dust/dirt from being mixed into the O-ring.
- Use the product in an environment at altitudes less than 2,000 m.
- Use the product in an environment of pollution degree 3.

IoT Pressure Sensors
E8PC

Detect Signs of Abnormalities in Cooling Water and Hydraulic Oil by Simultaneous Measurement of “Pressure + Temperature”

- Multi-sensing of “Pressure + temperature” for preventing a sudden stops or manufacturing defects.
- Various lineup of replacement adapters to enable easy replacement of your current pressure gauges and flow meters.
- Analog current output function in addition to the IO-Link communications function that can perform self-diagnosis of abnormalities in the sensor itself.

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

Refer to Safety Precautions on page 32.

#### Pressure monitoring

- **Rated pressure range**
  - E8PC-010D-E: -0.1 to 1 MPa
  - E8PC-100D-E: 0 to 10 MPa
  - E8PC-400D-E: 0 to 40 MPa
- **Display range**
  - E8PC-010D-E: -0.20 to 1.10 MPa
  - E8PC-100D-E: -0.10 to 11.00 MPa
  - E8PC-400D-E: -0.10 to 44.00 MPa
- **Withstand pressure**
  - E8PC-010D-E: 4 MPa
  - E8PC-100D-E: 30 MPa
  - E8PC-400D-E: 50 MPa
- **Burst pressure**
  - E8PC-010D-E: 8 MPa
  - E8PC-100D-E: 60 MPa
  - E8PC-400D-E: 80 MPa
- **Display resolution**
  - E8PC-010D-E: 0.001 MPa
  - E8PC-100D-E: 0.01 MPa
  - E8PC-400D-E: 0.01 MPa

#### Pressure monitoring precision

- ±1.0% of F.S. or less

#### Pressure repeatability

- ±0.3% of F.S. or less

#### Ambient temperature characteristics

- ±0.6% of F.S./10°C

#### Hysteresis

- Variable

#### Pressure type

- Gauge pressure

#### Temperature monitoring

- **Temperature monitoring rated range**
  - -20 to 100°C
- **Temperature monitoring precision**
  - ±4°C
- **Temperature repeatability**
  - ±1°C

#### Control output judgment (selectable)

- **Standard mode**
  - Judge if the measured value is the threshold value or more (or less).
- **Window mode**
  - Judge if the measured value is within the upper and lower limits.

#### Compatible fluid

- Gas and fluid not corroding the material of the wetted part (such as water, glycol solution, and oil)

#### Display method

- **Numerical value indication**
  - 4-digit 7-segment white LED with inverting function
- **Status indicator**
  - Normal operation (green), status indication (orange), and error (red) The content of status indication is selectable.
- **Output indicator**
  - OUT1 operation (orange), OUT2 operation (orange)
- **Unit indication**
  - E8PC-XXXX: MPa (white), E8PC-XXXX-E: MPa (white), bar (white), psi (white), °C (white)
- **IO-Link indicator**
  - Lighting when communications are in progress (green)

#### Delay setting

- 1 to 9999 ms
  - (Select a function from invalid, ON delay, OFF delay, and one-shot.)

#### Connection method

- M12, 4-pole connector type
- G3/4 male (Use the optional adapter to convert the diameter) Connection strength 20 N·m

#### Output ch1 (selectable)

- **Control output**
  - Pressure control output (N.O./N.C.)
  - E8PC-XXXX-D/T: PNP
  - E8PC-XXXX: NPN
  - 30 VDC or less, Class 2, max. 100 mA, residual voltage 1 V or less

#### Output ch2 (selectable)

- **Control output**
  - Pressure control output (N.O./N.C.) / temperature control output (N.O./N.C.)
  - E8PC-XXXX-D/T: PNP
  - E8PC-XXXX: NPN
  - 30 VDC or less, Class 2, 100 mA max., residual voltage 1 V or less

- **Analog current output**
  - Pressure analog output / Temperature analog output
  - Current output 4 to 20 mA (maximum load resistance 350Ω or less)
  - (Display value ± 2% of F.S.)

- **External input**
  - One-point teaching, zero point adjustment input (selectable, initial status: invalid)
  - short-circuit current 1.5 mA or less, input time 20 ms or more

</table>

**IO-Link**
- **IO-Link specification**: Ver 1.1
- **Baud rate**
  - E8PC-010D: COM2 (38.4kbps)
  - E8PC-010T: COM3 (230.4kbps)
- **Data length**
  - PD Size: 6 byte
  - OD Size: 1 byte (M-sequence type: TYPE_2_V)
- **Minimum cycle time**
  - E8PC-010D (COM2): 3.2 ms
  - E8PC-010T (COM3): 2.0 ms

**Power supply**
- **Power supply voltage**: 10 to 30 VDC (including 10% ripple (p-p)), Class 2
- **Power consumption**: 1,200 mW or less
  - (When power supply voltage is 30 V, current consumption must be 40 mA or less.
  - When power supply voltage is 10 V, current consumption must be 120 mA or less.)

**Protection circuit**
- Power supply reverse connection protection, output short-circuit protection, and output reverse connection protection

**Environment resistance**
- **Ambient temperature range**: -20 to 80°C in operation and storage, respectively (no condensation)
- **Ambient humidity range**: -35 to 85%RH in operation and storage, respectively (no condensation)
- **Vibration resistance (destruction)**: 1000 VAC, 50/60 Hz, 1 min. between current-carrying parts and case
- **Shock resistance (destruction)**: 10 to 2000 Hz, double amplitude 1.5 mm, 2 hours in X/Y/Z direction each
- **Impact (endurance)**: 500 m/s², three times in X/Y/Z direction each
- **Protective structure**: IP67
- **Pollution degree**: 3
- **Altitude**: 2,000 m or less
- **Installation place**: Indoor

**Material**
- **Wetted part**: Pressure port: SUS304L, diaphragm pressure port: Al₂O₃ (alumina), O-ring: FKM
- **Other than wetted part**: Head: PPSU, display unit: PES, button: PBT, chassis: SUS304L

**Weight**
- Approx. 190 g

**Accessories**
- Throttle (Model E8PC-YS and E8PC-YS-N), one each
- O-ring x 1 (Model E8PC-010: Model E8PC-010, Model E8PC-100: Model E8PC-100)
- Ferrite core x 1 (TDK's model ZCAT1730-0730A)
- User's manual (Japanese, English, and Chinese), one each
- Compliance sheet
- Index list

**1.** The pressure precision is defined based on the values measured in the ordinary temperature environment (approx. 23°C) using water at the ordinary temperature (approx. 23°C).

**2.** Even instantaneous pressure fluctuation such as water hammer must be within the withstand pressure. If instantaneous pressure fluctuation is expected, use the throttle included in the package.

**3.** If the pipe temperature exceeds 70°C, do not contact any cables with the pipe.

**4.** The maximum actual response time has error of 1 ms when the set response time is 3 to 10 ms, 5 ms when it is 11 to 100 ms, and +5% when it is 101 ms or more.

**5.** The pressure repeatability is the error of the detection point when pressure is applied repeatedly in the ordinary temperature environment (approx. 23°C) using water at the ordinary temperature (approx. 23°C) in the rated pressure range.

**6.** The ambient temperature characteristics are prescribed based on the value measured using oil as applying a pressure value of 50% of the maximum rated pressure.

**7.** The temperature monitoring precision is prescribed based on the value measured using water.

- Temperature measurements are affected by both of the temperatures, the medium and the piping.
- Temperature measuring elements are installed on the back surface of the piezoelectric element (inside the product) and used to measure the temperature. It might take long for the measured value to get stable according to the heat transmission speed.

**8.** Do not connect analog current output with the master unit of IO-Link. Otherwise, the unit might fail.
# E8PC

## I/O Circuit Diagrams

### PNP output

## Timing Charts

The timing chart is described below by using the pressure control output of OUT1 as an example. The activity is the same even when temperature control output is set in OUT2.

### PNP output

<table>
<thead>

Nomenclature

[Status indicators: green/orange/red] Lit up according to the measured value and setting of pressure and temperature.

[Unit indicator: white] Displays the current unit setting.

Mode switching
[MODE] button Calls a menu, selects (determine) a menu, and switches the unit.

[Communication indicator: green] Lit up when IO-Link communications are in progress.

[Output indicator: orange] Lit up when output is ON.

[Measured value: white digital] Displays the measured value.

Switch setting
[UP/DOWN] button Changes the threshold value and setting parameters.
E8PC

Safety Precautions

Be sure to read the precautions for all models in the website at: http://www.ia.omron.com/.

Warning Indications

| Warning | Indicates a potentially hazardous situation which, if not avoided, will result in minor or moderate injury, or may result in serious injury or death. Additionally, there may be significant property damage. |
| Caution | Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury or in property damage. |

Precautions for Safe Use

Supplementary comments on what to do or avoid doing, to use the product safely.

Precaution for Correct Use

Supplementary comments on what to do or avoid doing, to prevent failure to operate, malfunction or undesirable effect on product performance.

Meaning of Product Safety Symbols

| General Prohibition | Indicates the instructions of unspecified prohibited action. |
| General caution | Indicates unspecified general alert. |
| Caution, explosion | Indicates the possibility of explosion under specific conditions. |
| Caution, high temperature | Indicates the possibility of injuries by high temperature under specific conditions. |
| Caution, fire | Indicates the possibility of fires under specific conditions. |

**WARNING**

This product is not designed or rated for ensuring safety of persons either directly or indirectly. Do not use it for such purpose.

The specification of this product is not for beverage, food, or medical chemicals. Do not use this product for the device contacting beverage, food, or medical chemicals.

Do not use the product with voltage in excess of the rated voltage. Excess voltage may result in malfunction or fire.

This product is not assumed to be used in explosion-proof areas. Do not use the product in explosion proof areas.

Never use the product with an AC power supply. Otherwise, explosion may result.

The product might fail or be destroyed. Do not impress any pressure exceeding the rated value even instantaneously.

The product might fail or be damaged. Do not stand on the sensor, or add excessive load.

The fluid in the pipe might spout out. Tighten the prescribed O-ring to the pipe.

The product might fail or be damaged. Piping, wiring, maintenance, and checkup must be done by operators with expertise.

The product might be damaged or fire. Do not short-circuit load.

The product might be damaged or fire. Be careful with polarity of the power supply to avoid incorrect wiring.

The user might get burned. The sensor surface temperature rises depending on the operating condition such as ambient temperature, power supply voltage, or fluid temperature. Be careful when operating or cleaning the product.

The following items are necessary for ensuring safety, so be sure to observe them.

- Do not use the product in the following installation areas.
  - (1) Locations subject to direct sunlight
  - (2) Locations subject to condensation due to high humidity
  - (3) Locations subject to corrosive gas
  - (4) Locations subject to vibration or mechanical shocks exceeding the rated values
  - (5) Locations subject to exposure to water, oil, chemicals
  - (6) Locations subject to stream
  - (7) Locations subjected to strong magnetic field or electric field

- Do not use in an environment exposed to an inflammable/explosive gas
- Do not use in an ambient atmosphere or environment exceeding the rating.
  - Although the product is classified into IP67, do not use it in water, under the rain, or outdoor.
  - Do not use the product for any inflammable, explosive, or corrosive fluids.
  - Do not freeze or solidify the fluid. Otherwise, the product might fail or be damaged.
  - Provide a relief valve to prevent the circuit from liquid sealing.
  - Make sure safety before installing/replacing the sensor, for example, stop the machine or depressurize the fluid.
  - In order to ensure safety of user operations and maintenance, install the product apart from high-pressure equipment or power equipment.
  - When revolving the product, support the chassis holding part with a spanner.
  - Wire this product separately from high-pressure wire or power wire. If wiring together with such wire or in the same duct, this product might receive induction, which might cause malfunctioning or damages.
  - Be sure to turn OFF the power before wiring.
  - Do not wire with a wet hand.
  - Use this product under the rated or smaller load. Otherwise, the product might be damaged or catch fire.
  - Connect load correctly.
• If the load and sensor use separate power supplies, turn ON the sensor’s power first.
• Process unwired terminals so that they do not contact other wire or equipment.
• Do not use the product with the main unit damaged.
• Be careful with the sharp screw parts.
• Do not pull connected cables hard.
• Do not use organic solvents such as thinner or alcohol for cleaning because they deteriorate the degree of protection and indication performance.
• Do not try to disassemble, repair, or alter the main unit.
• If disposing this product, handle it as industrial waste.
• This product is certified by the UL standard based on the assumption that Class 2 circuits are used. Operate this product using Class 2 power supply in the United States or Canada.
• Use cables of Omron model XS5F-D4 series or model XS5W-D4 series.
• The mark shown on the sensor nameplate means direct current.
• Electromagnetic environment: Industrial electromagnetic environment (EN 61326-1 Table2)

Precaution for Correct Use

• Do not use this product as a measuring apparatus for commercial transactions.
• Do not use this product for any fluids containing impurities.
• If the fluid is non-conductive and the pipe is made of resin, ground the chassis.
• Use the product in the condition that the fluid temperature is higher than the ambient temperature. For preventing condensation, use the product as dehumidifying by air conditioning and 30 cm or more apart from cold pipes.
• Do not add excessive impact such as falling or collision.
• Do not touch the detecting unit with bare hands.
• Apply grease to the thread parts to prevent them from getting hard to remove due to seizure.
• Fasten by the prescribed torque.
• When using a cable of which diameter is different from that of the recommended cable, prepare a ferrite core suitable for the cable diameter separately.
• Do not connect with the IO-Link master unit in analog output mode. This product might be damaged depending on the specification of the IO-Link master.
• Do not push the button with something sharp such as a screwdriver because doing so might damage the button.
• If using the product in an environment subject to sharp temperature variation, evaluate the product in the environment in advance.
• When implementing maintenance, use a soft brush or waste cloth so as not to damage the detecting unit or O-ring.
• When replacing the O-ring, prevent dust/dirt from being mixed into the O-ring.
• Use the product in an environment at altitudes less than 2,000 m.
• Use the product in an environment of pollution degree 3.

Piping Method

• Use adapters according to the connecting diameter of the pipe.
• To use the adapter, use the prescribed O-ring.
• If it is expected that the product receives excessive pulsation or surge pressure, use the throttle.
• When revolving the product, support the chassis holding part with a spanner.
• Mount the attached ferrite core at a position located within 10 mm from the edge of the cable bushing when you use this product as CE acceptable goods.

Terms and Conditions Agreement

Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranties.

(a) Exclusive Warranty. Omron’s exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.

(b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron’s sole obligation hereunder shall be, at Omron’s election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron’s analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See http://www.omron.com/global/ or contact your Omron representative for published information.

Limitation on Liability; Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

Suitability of Use.

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer’s application or use of the Product. At Buyer’s request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer’s application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Programmable Products.

Omron Companies shall not be responsible for the user’s programming of a programmable Product, or any consequence thereof.

Performance Data.

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron’s test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron’s Warranty and Limitations of Liability.

Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron’s representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions.

Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.
